# ProcessIQ — Bottleneck Analysis

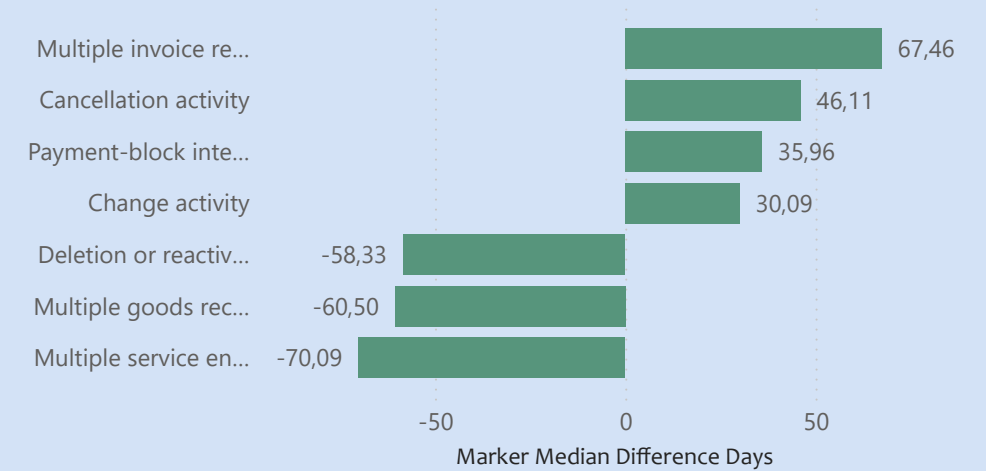

3-way match, invoice after GR | Cycle-time analysis uses 15,045 eligible cases

## Largest Shares of Observed Waiting Time (%)

Difference = median duration with marker – without marker.

## Cycle-Time Difference Associated with Diagnostic Markers

| Transition                                          | Affected cases | Median Wait (Days) | P90 Wait (Days) | Wait Share (%) |
|-----------------------------------------------------|----------------|--------------------|-----------------|----------------|
| Vendor creates invoice → Record Invoice Receipt     | 4886           | 20,39              | 68,03           | 14,42          |
| Vendor creates invoice → Record Goods Receipt       | 5253           | 1,49               | 7,39            | 2,21           |
| Remove Payment Block → Clear Invoice                | 1892           | 13,23              | 57,54           | 4,01           |
| Record Service Entry Sheet → Vendor creates invoice | 1713           | 8,01               | 27,92           | 2,49           |
| Record Invoice Receipt → Remove Payment Block       | 2004           | 6,54               | 28,89           | 2,49           |
| Record Invoice Receipt → Clear Invoice              | 7718           | 21,96              | 65,03           | 24,32          |
| Record Goods Receipt → Vendor creates invoice       | 3383           | 1,52               | 17,61           | 2,00           |
| Record Goods Receipt → Record Invoice Receipt       | 5360           | 19,08              | 67,18           | 18,52          |
| Create Purchase Order Item → Vendor creates invoice | 4364           | 9,39               | 30,32           | 5,88           |

Priority Evidence Summary

| Rank | Band | Opportunity                                         | Score | Cases | Reach (%) | Delay (Days) |
|------|------|-----------------------------------------------------|-------|-------|-----------|--------------|
| 1    | P1   | Investigate payment-block prevention and resolution | 78,00 | 2252  | 14,97     | 35,96        |
| 2    | P1   | Investigate invoice-receipt-to-clearing delay       | 77,00 | 7718  | 51,30     | 21,96        |
| 3    | P1   | Investigate repeated formal invoice receipts        | 75,00 | 1221  | 8,12      | 67,46        |
| 4    | P2   | Investigate goods-receipt-to-invoice-receipt delay  | 70,00 | 5360  | 35,63     | 19,08        |
| 5    | P2   | Investigate vendor-invoice-to-formal-receipt delay  | 70,00 | 4886  | 32,48     | 20,39        |

Recommended Investigation and Decision Cautions

| title                                               | recommended_next_analysis                                                                                                           | decision_caution                                                                                                               |
|-----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| Investigate goods-receipt-to-invoice-receipt delay  | Segment the transition by supplier, purchasing organisation, and item category to locate slow invoice-receipt posting patterns.     | This is a directly-follows transition. Cases containing an intermediate recorded event are not represented by this measure.    |
| Investigate vendor-invoice-to-formal-receipt delay  | Compare posting delays by supplier and processing group, and verify whether the two timestamps represent a controllable handoff.    | The vendor-creation timestamp and formal receipt timestamp may come from different systems with different recording semantics. |
| Investigate payment-block prevention and resolution | Segment blocked cases by supplier and purchasing attributes, then measure block-to-release and release-to-clearing time separately. | The marker is associated with longer duration but does not prove that the payment block caused the entire difference.          |
| Investigate repeated formal invoice receipts        | Classify repeated receipts as partial invoices, corrections, reversals, or potential duplicates before proposing controls.          | Repeated invoice receipts are not automatically duplicates or errors; legitimate partial and corrective postings may exist.    |
| Investigate invoice-receipt-to-clearing delay       | Enrich cases with contractual due dates and payment terms, then separate expected payment waiting from avoidable clearing delay.    | Long calendar time may reflect agreed payment terms. Do not treat the complete observed wait as operational waste.             |

# ProcessIQ — Conformance & Control Review

Selected category | Incomplete evidence remains separate from confirmed review cases

Only 9 cases require review based on contradictory recorded ordering. The 5,506 incomplete cases lack sufficient evidence and must not be labelled non-conforming.
